RYNIXSOFT INTERNSHIP- WEEK 5

DIGITAL TALENT MANAGEMENT SYSTEM

SWETHASUPRIYA AS [RXS26128] **UI/UX DESIGNER**

1. INTRODUCTION

DTMS is a platform designed to help organizations manage employee tasks, track performance, and streamline internal processes such as task allocation, leave management, and user administration.

2. PROBLEM STATEMENT

Organizations face challenges in:

- Managing employee tasks efficiently
- Tracking progress and performance
- Handling leave requests smoothly
- Maintaining a clear admin-user workflow

Existing systems are often:

- Complex
- Cluttered
- Not user-friendly

3. OBJECTIVE

Research → Ideate → Design → Test → Iterate

4. TARGET USERS

- Employees (Task handling, leave requests)
- HR Managers (Monitoring and approvals)
- Admins (User management and system control)

5. GOAL

- Create a clean and intuitive interface
- Improve task visibility and tracking
- Simplify leave application process
- Provide clear admin control panel
- Ensure consistent experience across devices

6. USER PERSONA

Name: Rahul
Role: Employee
Goal: To easily track tasks and performance
Pain Points:

- Confusing dashboards
- Hard to find task details
- No clear progress tracking

7. USER FLOW

Login → Dashboard → Task Page → Admin Panel

This flow ensures smooth navigation and reduces user confusion.

8. WIREFRAMES (LOW-FIDELITY)

Low-fidelity wireframes were created to plan the layout and structure of the system.
These include:

- Login Page
- Dashboard
- Task Page
- Admin Panel

9. HIGH-FIDELITY DESIGN & PROTOTYPE

A high-fidelity interactive prototype was developed using Figma.

Features:

- Clickable navigation
- Clean layout
- Consistent design

Design Choices:

- Color: Blue & White (Professional and clean)
- Font: Poppins (Readable and modern)
- Layout: Simple and structured

10. RESEARCH & INSIGHTS

Key Findings:

- Users prefer simple and clear navigation
- Too much data causes confusion
- Step-by-step flows improve usability

- Visual hierarchy is important for dashboards

11. USABILITY ISSUES IDENTIFIED

Dashboard Overload

- Too many elements with equal importance

Apply Leave Complexity

- All inputs shown in one screen

Calendar Density

- Too many tasks displayed at once

Admin Panel Hierarchy Issue

- No clear distinction between important and secondary data

User Management Clutter

- Difficult to scan user information

12.DESIGN IMPROVEMENTS (BEFORE → AFTER)

Dashboard

Improved dashboard by highlighting "Today's Tasks" as the main focus, making it easier for users to understand and navigate.

Apply Leave Flow

Converted the leave form into a step-by-step process, reducing complexity and making it more user-friendly.

Calendar Screen

Reduced clutter and added filters to help users quickly view and understand important tasks.

Admin Panel

Introduced visual hierarchy by highlighting key metrics, improving clarity and decision-making.

User Management

Redesigned using a clean table layout with better spacing and status indicators for easy readability.

13. DESIGN SYSTEM

Colors:

- Primary: Blue / Purple (for actions)
- Secondary: Light backgrounds

- Status:
  - Green → Active
  - Red → Inactive

Typography:

- Headings → Bold, Large
- Body → Medium
- Labels → Small

Components:

- Buttons (Primary & Secondary)
- Cards (for dashboard)
- Tables (for admin panel)
- Input fields

14. KEY LEARNINGS

- Simplicity improves usability
- Visual hierarchy is very important
- Step-by-step flows reduce confusion
- Consistency builds better user experience

15. FINAL OUTCOME

- Clean and structured UI
- Improved navigation
- Reduced user confusion
- Better task completion speed
- Consistent design across screens

17. CONCLUSION

The DTMS platform was redesigned to enhance usability and improve overall user experience. By identifying key issues and applying structured design improvements, the final product became more intuitive, efficient, and user-friendly.
