RYNIXSOFT INTERNSHIP- WEEK 4

DIGITAL TALENT MANAGEMENT SYSTEM

SWETHASUPRIYA AS [RXS26128] **UI/UX DESIGNER**

1. INTRODUCTION

The Digital Talent Management System (DTMS) is designed to help organizations efficiently manage employee skills, tasks, and performance. The system provides a centralized platform for tracking talent development and improving productivity.

2. PROBLEM STATEMENT

Many organizations face challenges in managing employee tasks and tracking performance effectively. Existing systems are often complex, lack clarity, and make it difficult for users to navigate and access important information.

3. OBJECTIVE

The main objective of this project is to design a user-friendly system that:

- Simplifies task management
- Improves visibility of employee performance
- Provides easy navigation and clear interface
- Enhances overall user experience

4. TARGET USERS

- Employees
- Admin/Managers
- HR Team

5. USER RESEARCH

Basic research was conducted by collecting feedback from potential users.

Key Findings:

- Users find dashboards confusing
- Difficulty in tracking tasks

- Poor navigation in existing systems
- Need for a clean and simple interface

6. USER PERSONA

Name: Rahul
Role: Employee
Goal: To easily track tasks and performance
Pain Points:

- Confusing dashboards
- Hard to find task details
- No clear progress tracking

7. USER FLOW

Login → Dashboard → Task Page → Admin Panel

This flow ensures smooth navigation and reduces user confusion.

8. WIREFRAMES (LOW-FIDELITY)

Low-fidelity wireframes were created to plan the layout and structure of the system.
These include:

- Login Page
- Dashboard
- Task Page
- Admin Panel

9. HIGH-FIDELITY DESIGN & PROTOTYPE

A high-fidelity interactive prototype was developed using Figma.

Features:

- Clickable navigation
- Clean layout
- Consistent design

Design Choices:

- Color: Blue & White (Professional and clean)

- Font: Poppins (Readable and modern)
- Layout: Simple and structured

10. USABILITY TESTING

Basic usability testing was conducted with 2–3 users.

Feedback Collected:

- Easy to navigate
- Clean interface
- Minor confusion in button visibility

11. ITERATIONS

Based on feedback, the following improvements were made:

- Increased button visibility
- Simplified dashboard layout
- Improved spacing and alignment

12. FINAL OUTCOME

- Improved user experience
- Easy navigation
- Better task tracking
- Clean and professional interface

14. CONCLUSION

The DTMS project successfully demonstrates how a user-centered design approach can improve usability and efficiency. By focusing on simplicity and clarity, the system provides a better experience for users and helps in effective talent management.
